

**Smart Integrated
Mobility.**

New Toll Plaza EETS Compliant on A31 Italy

A4 Mobility.

Ten Years Experience in the world of ITS.

***A4 Mobility** is a well-known player in the industry with over 10 years' experience in the design, development and management of ITS (Intelligent Transportation Systems) services and solutions for mobility and safety at national and international level.*

From traffic management to tolling systems, from safety to access control, **A4 Mobility** has unparalleled expertise in system integration in all the technological areas of ITS, capable of covering all market segments from applications to systems and installations.

As part of the A4 Holding group – a leader of excellence in communication and mobility infrastructures - the company is recognized for its reliability, the professionalism of its team of technicians and engineers, as well as being an organization fully oriented towards the needs of its customers.

Intelligent Transport Systems

The key factor in a new generation of transport and mobility solutions.

The approach to an integrated solution in line with the customer's needs lays out **A4 Mobility's** wide range of ITS skills in the field, ranking the company among today's best system integrators.

The ability to communicate between different systems using their combined potential makes **A4 Mobility** the ideal partner for consulting, design, development, management and maintenance of application solutions and mobility installations of all types.

A4 Mobility is a privileged partner for public and private companies and institutions, thanks to the network of partnerships and relationships with local communities and major industry players.

The A4 Mobility reference model is a modular and scalable infrastructure which gathers, analyzes and distributes information and data between people, vehicles and goods on the move. By connecting them to the infrastructure and to central services we aim to:

Increase efficiency in the transportation sector

Improve the safety of people and vehicles

Reduce traffic and the environmental impact

Speed up transportation times

Facilitate the intermodal transport

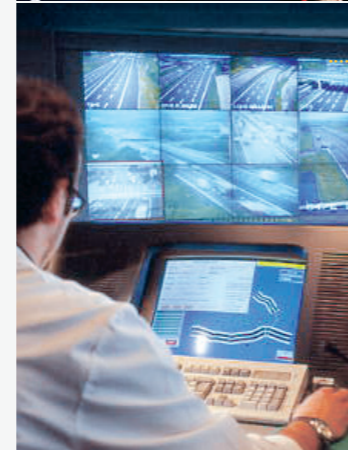

Towards the future.

Info-mobility becomes smarter.

Building on decades of experience in managing complex mobility systems along motorways, **A4 Mobility** has developed a series of innovative Smart Solutions to meet the advanced needs of today's new requirements in mobility.

A new way to serve the country's needs for the management of mobility, travellers and the transport of goods, increasingly integrated, efficient, affordable and environmentally sustainable. Solutions where mobility, urban development and respect for the environment move together towards a better future.

All A4 Mobility's Solutions

Traffic Management.

- **Monitoring and Forecasting Systems**
- **Strategic Information Systems**
- **Strategic Fleet Management**
- **Traffic Control Center (TCC)**

In the socio-economic growth and development of a community, the quality of the urban and suburban infrastructure is of crucial importance. Innovative solutions are needed to meet growing traffic levels, reduce both air and noise pollution and accommodate the increasingly demanding expectations of travellers in terms of services and information.

Since its experience in the motorway sector, **A4 Mobility** has expanded its proposal in line with the ITS industry's benchmark. Future-oriented management platforms - scalable, modular and easy to implement - that improve the quality of travel, reduce environmental impact and provide both mobility managers and users alike with services and information for a top quality on-the-road experience.

Safety and Control.

- **Integrated Safety Management Systems**
- **Road Safety Systems and Automatic Accident Detection**
- **Security Systems and Authorization of Port Transits**
- **Access Control Systems**
- **Integrated Solutions for Car Parking Management**

In the mobility sector, safety is key to manage infrastructure. Monitoring the traffic flow will reduce risks and enable immediate action in case of accidents or emergency situations. **A4 Mobility** can count on integrated access control and video surveillance systems applicable in transportation, mobility and logistic sectors.

A4 Mobility is the ideal partner for the integration of different solutions in parking management: the parking time, the assignment and reservation of parking bays are made on the Internet via websites or apps.

Tolling Systems.

- **Toll Collection and Ticketing Systems**
- **Integrated Payment Systems**
- **Toll Management System Applications**
- **Electronic Toll Collection Systems**

A4 Mobility's tolling systems offer sustainable sources of funding to both public and private operators for the management of roads, motorways, bridges and tunnels; resources which are essential for compliance with safety standards, infrastructure maintenance and continuous improvement of services to users.

A4 Mobility provides advice and service at each stage of the tolling process - from the planning stage and its implementation to its continuous operation - providing the customer with a wide range of toll solutions from traditional systems to the most modern. In particular, as part of the Electronic Toll Collection, **A4 Mobility** can guarantee solid experience in system design and installation. **A4 Mobility** has designed and carried out the tolling systems and infrastructure to the requirements of the EETS (European Electronic Toll Service) and has promoted initiatives on Free-Flow systems.

A4 Mobility also offers to toll operators a platform for the exchange and reconciliation of transactions to recover funds generated by users on different service provider. The platform also allows for the creation and integration of other services related to mobility, both for the internal management of the operator and for the end user.

A4 Mobility can guarantee each particular customer a specific toll operation design project with the most consistent specifications and timing in line with general management and specific financial goals.

A4 Mobility has acquired expertise and knowledge thanks to many years' experience internationally and in Italy - the country with the highest level of complexity among road toll systems in the world.
